73 The Nile River fed Egyptian civilization for hundreds
   of years. The Longest River the Nile is 4,160 miles
   long&acirc"the world&acirc"s longest river. It begins near
   the equator in Africa and flows north to the
```

73 Mediterranean Sea. A delta is an area near a river's mouth where the water deposits fine soil called silt. Red Land, Black Land The ancient Egyptians lived in narrow bands of land on each side of the Nile. They called this region the black land because of the fertile soil that the floods deposited. The red land was the barren desert beyond the fertile region. When the birds arrived, the annual flood waters would soon follow. Working together, they dug irrigation canals that carried river water to dry areas. These innovative, or new, techniques gave them more farmland. They were the first to weave fibers from flax plants into a fabric called linen. Egyptians often painted walls white to reflect the blazing heat. One ancient painting even shows a man ready to hit a catfish with a wooden hammer. A boomerang is a curved stick that returns to the person who threw it.) Eventually, Egyptians equipped their reed boats with sails and oars. The river's current was slow, so boaters used paddles to go faster when they traveled north with the current. Going south, they raised a sail and let the winds that blew in that direction push them. The Nile provided so well for Egyptians that sometimes they had surpluses, or more goods than they needed. Ancient Egypt had no money, so people exchanged goods that they grew or made. When farmers produce food surpluses, the society's economy begins to expand. For example, some ancient Egyptians learned to be scribes, people whose job was to write and keep records. Some skilled artisans erected stone or brick houses and temples. These traders took Egyptian products such as scrolls, linen, gold, and jewelry. Egyptians created a government that divided the empire into 42 provinces. Many officials worked to keep the provinces running smoothly. Before entering a temple, a priest bathed and put on special linen garments and white sandals. In Egypt, people became slaves if they owed a debt, committed a crime, or were captured in war. Unlike other ancient African cultures, in Egyptian society men and women had fairly equal rights. For example, they could both own and manage their own property. Almost all Egyptians married when they were in their

73 early teens. As in many ancient societies, much of the knowledge of Egypt came about as priests studied the world to find ways to please the gods. Based on that, Egyptians developed the world's first practical calendar. Doctors believed that the heart controlled thought and the brain circulated blood, which is the opposite of what is known now. One "cure" for an upset stomach was to eat a hog's tooth crushed inside sugar cakes! Hieroglyphs

Hieroglyphs are pictures that stand for different words or sounds. Early Egyptians created a hieroglyphic system with about 700 characters. Egyptians cut the stems into strips, pressed them, and dried them into sheets that could be rolled into scrolls. Legend says a king named Narmer united Upper and Lower Egypt. Some historians think Narmer actually represents several kings who gradually joined the two lands. It combined the red Crown of Lower Egypt with the white Crown of Upper Egypt. When a king died, one of his children usually took his place as ruler. Historians divide ancient Egyptian dynasties into the Old Kingdom, the Middle Kingdom, and the New Kingdom. The word pharaoh meant "great house," and it was originally used to describe the king's palace. They replaced the mud brick with a small pyramid of brick or stone. It is called a step pyramid because its sides rise in a series of giant steps. He ordered the construction of the largest pyramid ever built. Miners cut the huge blocks of stone using copper saws and chisels. These tools were much softer than the iron tools developed later. One reason is that the pyramids drew attention to the tombs inside them. Grave robbers broke into the tombs to steal the treasure buried with the pharaohs. Egyptians believed that if a tomb was robbed, the person buried there could not have a happy afterlife. This way, the pharaohs hoped to protect their bodies and treasures from robbers. This was to confuse grave robbers about which passage to take. Sometimes relatives, such as the queen, were buried in the extra rooms. Artists also followed strict rules about how to portray humans. Such activities included growing and preparing food, caring for animals, and building

- 73 boats. Only a secret tomb built for a New Kingdom pharaoh was ever found with much of its treasure untouched. The dazzling riches found in this tomb show how much wealth the pharaohs spent preparing for the afterlife. This period of Egyptian history is called the Middle Kingdom.
